

Olga Mezitt Rhododendron

Rhododendron 'Olga Mezitt'

Height: 6 feet

Spread: 5 feet

Sunlight:

Hardiness Zone: 5a

Description:

One of the hardier varieties, this broadleaf evergreen shrub has showy orange-pink flowers in spring on an upright habit, interesting fall coloration; absolutely must have well-drained, highly acidic and organic soil, use plenty of peat moss when planting

Ornamental Features

Olga Mezitt Rhododendron is blanketed in stunning clusters of lightly-scented hot pink trumpet-shaped flowers at the ends of the branches in mid spring, which emerge from distinctive rose flower buds. It has green foliage. The narrow leaves turn an outstanding red in the fall. The fruit is not ornamentally significant.

Landscape Attributes

Olga Mezitt Rhododendron is an open multi-stemmed evergreen shrub with an upright spreading habit of growth. Its relatively coarse texture can be used to stand it apart from other landscape plants with finer foliage.

This is a relatively low maintenance shrub, and should only be pruned after flowering to avoid removing any of the current season's flowers. It has no significant negative characteristics.

Olga Mezitt Rhododendron is recommended for the following landscape applications;

- Accent
- Mass Planting
- General Garden Use

Planting & Growing

Olga Mezitt Rhododendron will grow to be about 6 feet tall at maturity, with a spread of 5 feet. It tends to be a little leggy, with a typical clearance of 1 foot from the ground, and is suitable for planting under power lines. It grows at a slow rate, and under ideal conditions can be expected to live for 40 years or more.

This shrub does best in full sun to partial shade. It requires an evenly moist well-drained soil for optimal growth, but will die in standing water. It is very fussy about its soil conditions and must have rich, acidic soils to ensure success, and is subject to chlorosis (yellowing) of the leaves in alkaline soils. It is somewhat tolerant of urban pollution, and will benefit from being planted in a relatively sheltered location. Consider applying a thick mulch around the root zone in winter to protect it in exposed locations or colder microclimates. This particular variety is an interspecific hybrid.
